Field gas sold at the source: a first sizing

What 2 or 5 million cubic feet a day, bought at a field or gathering point on a multi-year term, could power and earn, with the math shown.

2 MMCF/D, PER YEAR	5 MMCF/D, PER YEAR	PRICE BASIS
$17k to $572k	$34k to $1.42M	Up to $0.75 per MMBtu, under 1¢ per kWh

2 AND 5 MMCF/D IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL

2 MMCF/D

Power from the gas	about 9.6 MW
Compute modules	9
Gas engines (running plus one spare)	5 at 2.5 MW
Land	about 17 acres
Gas bought per year	719k MMBtu
Gas payment at up to $0.75/MMBtu	up to $539k
Land lease at $1,000 to $2,000/acre	$17k to $33k
Total per year	**$17k to $572k**

5 MMCF/D

Power from the gas	about 24.0 MW
Compute modules	21
Gas engines (running plus one spare)	7 at 4.5 MW
Land	about 34 acres
Gas bought per year	1,798k MMBtu
Gas payment at up to $0.75/MMBtu	up to $1.35M
Land lease at $1,000 to $2,000/acre	$34k to $68k
Total per year	**$34k to $1.42M**

THE MATH

Gas at 1,037 Btu per cubic foot; engines at a heat rate of 9,000 Btu/kWh; compute is power divided by 1.2 for cooling and losses; compute modules of about 1 MW each; land of 5 acres plus 1.2 acres per MW; 95% run time. The same math runs on our Site model page, where any flow can be tried. Prices in US dollars.

WHAT IT WOULD LOOK LIKE

- Engines and compute modules on a small parcel next to the tap, with no grid connection.
- Steady take, every day, for the length of the tenant's lease. We build and run the site; the owner puts in no capital.
- Needs gas that can be contracted for years, ideally with a gathering-line backup.

This is a first read, not an offer: no cost and no obligation. The real price, volume and term are set in the gas agreement after a review of the supply, the surface and the route to fiber. Send a field or tap location and a flow, and we reply with a sizing for that point.
