Mine gas at Mine 84 (Pennsylvania), Crown I and Green Valley (Illinois): site sizing

What this gas could power, how much land it would take, and what it could earn each year.

23.3 MW	21	33 ac	1,744k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
$436k to $5.23M	$33k to $66k	$469k to $5.30M

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=GAS&FLOW=4.85

THE MATH

Mine gas flared at three projects, as pipeline-gas equivalent	4.85 MMcf/d
Energy in the gas	209.6 MMBtu per hour
Power at a heat rate of 9,000 Btu/kWh	about 23.3 MW
Compute (power less cooling and losses, /1.2)	about 19.4 MW
Compute modules (about 1 MW each)	21
Gas engines (running plus one spare)	7 at 4.5 MW
Land: 5 acres plus 1.2 acres per MW	about 33 acres
Gas bought per year (95% run time)	1,744k MMBtu
Gas payment, $0.25 to $3.00/MMBtu	$436k to $5.23M
Land lease at $1,000 to $2,000 per acre per year	$33k to $66k

Mine gas at about 79% methane (about 800 Btu per cubic foot) is shown as its pipeline-gas equivalent at 1,037 Btu per cubic foot: 6.3 MMcf/d of mine gas is about 4.85 MMcf/d equivalent. Prices in US dollars; the gas price band is an example, set in the gas agreement.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Daily flow and methane by well for 12 to 24 months
- Engines as qualifying destruction devices under the ARB Mine Methane Capture protocol; the credits stay with the project
- PA DEP air and oil and gas approvals at Mine 84; Illinois EPA air permits at Crown I and Green Valley
- Gas rights holder at each site

Source: Climate Action Reserve project reports, 2026 (Mine 84 to March 31, Crown I to April 30, Green Valley to August 31): about 6.3 MMcf/d of mine gas at about 79% methane, about 4,966 Mcf/d of methane in all. This is an estimate from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
