Warren County District Landfill, Oxford, New Jersey: site sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

2.2 MW	2	8 ac	202k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $607k	$8k to $15k	$8k to $622k

THE MATH

Landfill gas flared (2026, Authority minutes)	1,000 scfm
Methane content (2026, Authority minutes)	40%
Energy in the gas	24.3 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 2.2 MW
Compute (power less cooling and losses, /1.2)	about 1.8 MW
Compute modules (about 1 MW each)	2
Gas engines (running plus one spare)	3 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 8 acres
Gas bought per year (95% run time)	202k MMBtu
Gas payment, up to $3.00/MMBtu	up to $607k
Land lease at $1,000 to $2,000 per acre per year	$8k to $15k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Measured flow; the April 2026 figure is a developer estimate
- NJDEP air preconstruction permit (N.J.A.C. 7:27-8)
- White Township Land Use Board use variance
- Terms of the coming flare gas RFP

Source: Pollution Control Financing Authority of Warren County, minutes of April 21, 2026 (about 1,000 cubic feet a minute at 40% methane, all flared); on June 16, 2026 the board voted to go to RFP for the flare gas. This is an estimate from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
