Field gas sold at the source: a first sizing

What 1 or 1.5 million cubic feet a day, bought at a field or gathering point on a multi-year term, could power and earn, with the math shown.

1 MMCF/D, PER YEAR	1.5 MMCF/D, PER YEAR	PRICE BASIS
$11k to $291k	$14k to $432k	Up to $0.75 per MMBtu, under 1¢ per kWh

1 AND 1.5 MMCF/D IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL

1 MMCF/D	
Power from the gas	about 4.8 MW
Compute modules	5
Gas engines (running plus one spare)	3 at 2.5 MW
Land	about 11 acres
Gas bought per year	360k MMBtu
Gas payment at up to $0.75/MMBtu	up to $270k
Land lease at $1,000 to $2,000/acre	$11k to $22k
Total per year	**$11k to $291k**

1.5 MMCF/D	
Power from the gas	about 7.2 MW
Compute modules	7
Gas engines (running plus one spare)	4 at 2.5 MW
Land	about 14 acres
Gas bought per year	539k MMBtu
Gas payment at up to $0.75/MMBtu	up to $405k
Land lease at $1,000 to $2,000/acre	$14k to $27k
Total per year	**$14k to $432k**

THE MATH

Gas at 1,037 Btu per cubic foot; engines at a heat rate of 9,000 Btu/kWh; compute is power divided by 1.2 for cooling and losses; compute modules of about 1 MW each; land of 5 acres plus 1.2 acres per MW; 95% run time. The same math runs on our Site model page, where any flow can be tried. Prices in US dollars.

WHAT IT WOULD LOOK LIKE

- Engines and compute modules on a small parcel next to the tap, with no grid connection.
- Steady take, every day, for the length of the tenant's lease. We build and run the site; the owner puts in no capital.
- Needs gas that can be contracted for years, ideally with a gathering-line backup.

This is a first read, not an offer: no cost and no obligation. The real price, volume and term are set in the gas agreement after a review of the supply, the surface and the route to fiber. Send a field or tap location and a flow, and we reply with a sizing for that point.
