GFL Eastern Ontario Waste Handling Facility, Moose Creek (North Stormont), Ontario: site sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

10.6 MW	10	18 ac	967k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $2.90M	$18k to $35k	$18k to $2.94M

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=3986&CH4=47.6

THE MATH

Landfill gas flared (2025)	3,986 scfm
Methane content (2025)	47.6%
Energy in the gas	116.2 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 10.6 MW
Compute (power less cooling and losses, /1.2)	about 8.8 MW
Compute modules (about 1 MW each)	10
Gas engines (running plus one spare)	8 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 18 acres
Gas bought per year (95% run time)	967k MMBtu
Gas payment, up to $3.00/MMBtu	up to $2.90M
Land lease at $1,000 to $2,000 per acre per year	$18k to $35k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Our own gas engines on a fenced parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Sized on the flared share only; the power plant keeps its gas
- Gas trend: over 82 million m3 collected in 2024, over 78 million in 2025
- Grid and fiber access on the site
- A fenced parcel near the flare

Source: Ontario Ministry of the Environment, Conservation and Parks, Landfill Gas Collection, Use and Destruction dataset, 2025 rows (file updated Jul 27, 2026; read Nov 12, 2026): over 78 million m3 of landfill gas collected, 75.7% of it flared, at 47.6% methane. The other 24.3% feeds the site's 4.2 MW power plant and is not counted here. Shown in scfm treating the reported m3 as standard cubic meters. This is an estimate from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
