Hardin County Landfill, Elizabethtown, Kentucky: site sizing

What the landfill gas the site collects could power, how much land it would take, and what it could earn each year.

2.6 MW	3	8 ac	240k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $719k	$8k to $16k	$8k to $735k

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=895&CH4=53.4

THE MATH

Landfill gas collected (2023)	895 scfm
Methane content (2023)	53.4%
Energy in the gas	28.8 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 2.6 MW
Compute (power less cooling and losses, /1.2)	about 2.2 MW
Compute modules (about 1 MW each)	3
Gas engines (running plus one spare)	3 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 8 acres
Gas bought per year (95% run time)	240k MMBtu
Gas payment, up to $3.00/MMBtu	up to $719k
Land lease at $1,000 to $2,000 per acre per year	$8k to $16k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Our own gas engines on a fenced parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- About 512 scfm flared in 2022 (EPA LMOP); the rest goes to the 2.4 MW power plant on site
- When the power plant's gas contract with the County ends
- Space for a fenced parcel near the flare
- Gas quality (siloxanes, H2S) for engines
