Sandtown Landfill, Felton, Delaware: a first sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

2.1 MW	2	8 ac	196k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $147k	$8k to $15k	$8k to $162k

THE MATH

Landfill gas flared beyond the existing engine plant (FY2025)	776 scfm
Methane content	49.7%
Energy in the gas	23.6 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 2.1 MW
Compute (power less cooling and losses, /1.2)	about 1.8 MW
Compute modules (about 1 MW each)	2
Gas engines (running plus one spare)	3 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 8 acres
Gas bought per year (95% run time)	196k MMBtu
Gas payment, up to $0.75/MMBtu	up to $147k
Land lease at $1,000 to $2,000 per acre per year	$8k to $15k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- When the existing gas agreement ends, and whether it covers gas the engines do not take
- DNREC Division of Air Quality permit (7 DE Admin. Code 1102)
- Kent County data center ordinance LC 26-06: industrial zoning plus a Levy Court conditional use
- Space for a fenced parcel near the flare

Source: DSWA FY2025 annual report chart (about 408 million cubic feet flared, about 776 scfm). Methane from EPA's Greenhouse Gas Reporting Program. This is a first read from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
