Shoal Creek Mine, Alabama: a first sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

1.4 MW	2	7 ac	126k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $379k	$7k to $13k	$7k to $393k

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=500&CH4=50

THE MATH

Drained gas sent to the flare, first phase (2023 basis)	500 scfm
Methane content (assumed; not published)	50%
Energy in the gas	15.2 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 1.4 MW
Compute (power less cooling and losses, /1.2)	about 1.1 MW
Compute modules (about 1 MW each)	2
Gas engines (running plus one spare)	2 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 7 acres
Gas bought per year (95% run time)	126k MMBtu
Gas payment, up to $3.00/MMBtu	up to $379k
Land lease at $1,000 to $2,000 per acre per year	$7k to $13k

Mine gas: methane at about 1,012 Btu per cubic foot. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Drained flow and methane % per well today
- Which wells feed the flare, and whether more could be routed to it
- Who holds the gas rights under the mineral owner
- A small pad of mine surface next to the flare
- Remaining mine life and the panel plan

Source: EPA Greenhouse Gas Reporting Program, subpart FF, 2023: about 2,500 t of methane drained through degasification and destroyed by flaring, about 360,000 cubic feet of methane a day (250 scfm of methane, shown as 500 scfm at an assumed 50%). Public project records show the earlier pipeline sales stopped and a flaring project runs. This is a first read from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
