Woodside Sanitary Landfill & Recycling Center, Walker, Louisiana: a first sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

4.6 MW	5	11 ac	426k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $1.28M	$11k to $21k	$11k to $1.30M

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=1762&CH4=48

THE MATH

Landfill gas collected and flared (2022)	1,762 scfm
Methane content (2022)	47.8%
Energy in the gas	51.1 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 4.6 MW
Compute (power less cooling and losses, /1.2)	about 3.9 MW
Compute modules (about 1 MW each)	5
Gas engines (running plus one spare)	4 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 11 acres
Gas bought per year (95% run time)	426k MMBtu
Gas payment, up to $3.00/MMBtu	up to $1.28M
Land lease at $1,000 to $2,000 per acre per year	$11k to $21k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Sized to 2022; 2023 would give about 5.2 MW instead of about 4.65 MW
- Flow has more than doubled since 2017 (about 910 to 2,130 scfm) as the wellfield grew to 164 wells and intake runs 0.85 to 1.0 million tons a year
- Methane has varied from 38% to 48% since 2019: gas quality and oxygen matter for engines

Source: EPA Greenhouse Gas Reporting Program, Subpart HH, facility 1007797 (Envirofacts, pulled 2026-11-07): 2022 collected 926 million scf (about 1,762 scfm) at 47.8% methane, destroyed on site; matches EPA LMOP (2022). 2023, the newest year, was higher: about 2,127 scfm at 44.1%. Sized to the lower of the two newest years. This is a first read from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
