Marion County and Harrison County mines (ACNR), West Virginia: a first sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

4.0 MW	4	10 ac	368k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $276k	$10k to $20k	$10k to $296k

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=1458&CH4=50

THE MATH

Drained gas at one mine, first phase	1,458 scfm
Methane (assumed)	50%
Energy in the gas	44.3 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 4.0 MW
Compute (power less cooling and losses, /1.2)	about 3.4 MW
Compute modules (about 1 MW each)	4
Gas engines (running plus one spare)	4 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 10 acres
Gas bought per year (95% run time)	368k MMBtu
Gas payment, up to $0.75/MMBtu	up to $276k
Land lease at $1,000 to $2,000 per acre per year	$10k to $20k

Mine gas: methane at about 1,012 Btu per cubic foot. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Who holds the gas rights at each mine
- Current drained flow and methane % per well

Source: EPA Coalbed Methane Outreach Program profiles (2016 data): Marion County drained about 1.4 MMcf/d and Harrison County about 2.7. First phase: about 1.05 MMcf/d of methane at one mine (shown as 1,458 scfm at an assumed 50%). This is a first read from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
