West Elk Mine, Somerset, Gunnison County, Colorado: a first sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

2.5 MW	3	8 ac	228k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $171k	$8k to $16k	$8k to $187k

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=902&CH4=50

THE MATH

Borehole gas gatherable (estimate)	902 scfm
Methane (assumed)	50%
Energy in the gas	27.4 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 2.5 MW
Compute (power less cooling and losses, /1.2)	about 2.1 MW
Compute modules (about 1 MW each)	3
Gas engines (running plus one spare)	3 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 8 acres
Gas bought per year (95% run time)	228k MMBtu
Gas payment, up to $0.75/MMBtu	up to $171k
Land lease at $1,000 to $2,000 per acre per year	$8k to $16k

Mine gas: methane at about 1,012 Btu per cubic foot. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Gas engines on a small parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Federal approval to use or sell the methane
- Flow per borehole on the active panel
- A mobile setup that follows the panel is assumed

Source: EPA Coalbed Methane Outreach Program profile (2016 data): about 1.0 MMcf/d drained; boreholes flared since 2022. First phase assumes about 65% is gatherable: about 0.65 MMcf/d of methane (shown as 902 scfm at an assumed 50%). This is a first read from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
