Anchorage Regional Landfill, Eagle River, Alaska: site sizing

What the gas the site now flares could power, how much land it would take, and what it could earn each year.

4.2 MW	4	10 ac	388k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $1.16M	$10k to $20k	$10k to $1.18M

YOUR SITE IN OUR LIVE 3D MODEL — ACCRETIONCOMPUTE.COM/SITE-MODEL?SRC=LFG&FLOW=1535&CH4=50

THE MATH

Landfill gas collected less the JBER delivery (2025)	1,535 scfm
Methane content (2025)	50%
Energy in the gas	46.6 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 4.2 MW
Compute (power less cooling and losses, /1.2)	about 3.5 MW
Compute modules (about 1 MW each)	4
Gas engines (running plus one spare)	4 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 10 acres
Gas bought per year (95% run time)	388k MMBtu
Gas payment, up to $3.00/MMBtu	up to $1.16M
Land lease at $1,000 to $2,000 per acre per year	$10k to $20k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Our own gas engines on a fenced parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Measured flared flow today (the JBER plant's 2025 fuel use suggests the surplus may be nearer 1,300 scfm)
- The leachate evaporator planned for 2028 would take about 1,000 scfm (Municipality's May 2026 plan addendum)
- Engine exhaust heat for the evaporator
- Space for a fenced parcel near the flare
- Gas quality (siloxanes, H2S) for engines

Source: Municipality of Anchorage, Integrated Solid Waste Master Plan Addendum, May 2026, Section 9.2: about 2,835 scfm of landfill gas collected in 2025 at 50% methane, with about 1,300 scfm delivered to the JBER power plant; the remainder is sized here: https://www.muni.org/Documents/Departments/Solid%20Waste%20Services/Documents/ISWMP%20Addendum%202026.pdf (seen 2026-11-13). EPA's LMOP database listed about 1,330 scfm flared in 2022: https://www.epa.gov/system/files/documents/2024-09/lmopcompositedata.xlsx. This is an estimate from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
