Settler's Hill Recycling & Disposal Facility, Batavia, Illinois: site sizing

What the landfill gas the site collects could power, how much land it would take, and what it could earn each year.

3.5 MW	4	9 ac	319k
POWER FROM THE GAS	COMPUTE MODULES	LAND NEEDED	MMBTU BOUGHT / YR

GAS SALE, PER YEAR	LAND LEASE, PER YEAR	TOTAL TO THE OWNER, PER YEAR
up to $958k	$9k to $18k	$9k to $977k

THE MATH

Landfill gas expected in 2027 (estimate), once the turbine gas sale ends	1,317 scfm
Methane content (2023)	48.2%
Energy in the gas	38.4 MMBtu per hour
Power at a heat rate of 11,000 Btu/kWh	about 3.5 MW
Compute (power less cooling and losses, /1.2)	about 2.9 MW
Compute modules (about 1 MW each)	4
Gas engines (running plus one spare)	4 at 1.6 MW
Land: 5 acres plus 1.2 acres per MW	about 9 acres
Gas bought per year (95% run time)	319k MMBtu
Gas payment, up to $3.00/MMBtu	up to $958k
Land lease at $1,000 to $2,000 per acre per year	$9k to $18k

Landfill gas: about 1,012 Btu per cubic foot of methane. Prices in US dollars; the price band is the one shown on our Site model page.

WHAT IT WOULD LOOK LIKE

- Our own gas engines on a fenced parcel near the gas, a battery to smooth the load, and factory-built compute modules leased to an AI company.
- No grid connection and no export: all of the power is used on site.
- We build and run the site. The owner puts in no capital.
- Multi-year gas and land agreements, matched to the tenant's lease, at a fixed price.

WORTH CHECKING

- Whether the gas sale is renewed after 2026
- Decline of the closed landfill's gas flow
- Space for a fenced parcel clear of the recreation uses
- Gas quality (siloxanes, H2S) for engines

Source: Estimate from EPA data: about 1,739 scfm collected in 2023 at 48.2% methane (EPA Greenhouse Gas Reporting Program, subpart HH, facility 1002493: https://data.epa.gov/efservice/hh_gas_collection_system_detls/FACILITY_ID/1002493/JSON, seen 2026-11-13), carried to 2027 at a decline of about 6.7% a year, in line with the turbine plant's fuel use from 2023 to 2025 (EIA-923). The turbines take all of the gas until their power sale ends December 31, 2026. This is an estimate from public data, not an offer: no cost and no obligation. The real price and terms are set in the gas and land agreements after a site review.
